

San Juan River Basin Recovery Implementation Program (Colorado, New Mexico)

The San Juan River Basin Recovery Implementation Program protects and recovers endangered fishes in the San Juan River Basin while enabling water development to proceed. This broad-based effort brings together tribes, water developers, environmental organizations, and State and Federal agencies. A fish passage project and removal of non-native species are two success stories. Activities of the partnership have already benefited endangered fish species as well as many other species in the river basin.
